Create ToolTip

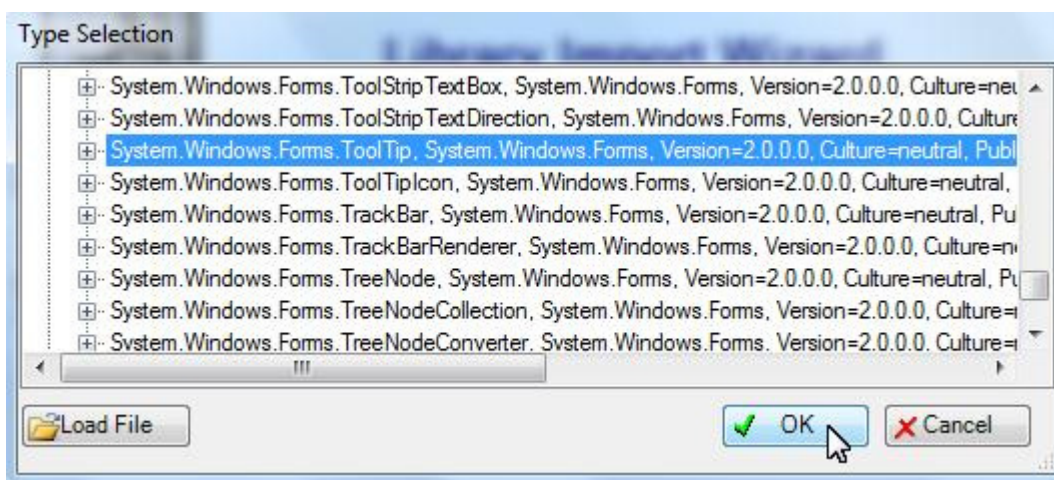

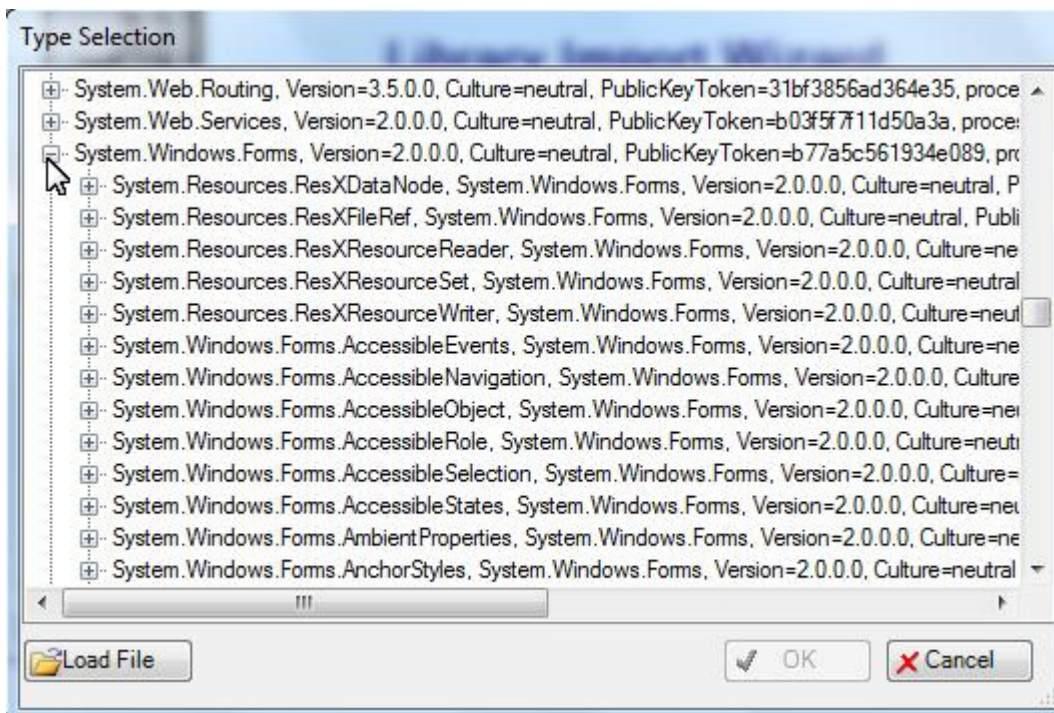

Add ToolTip to the Toolbox

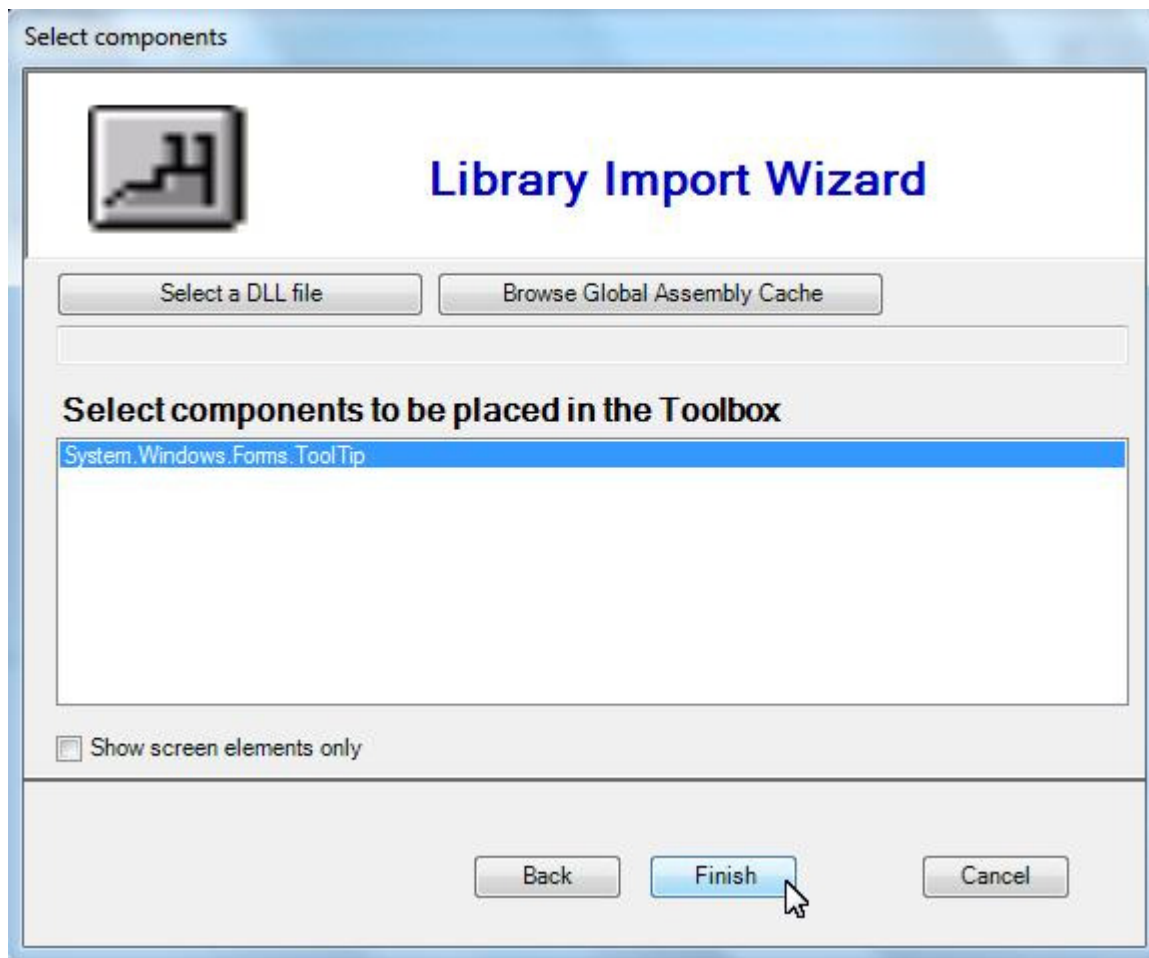

Choose menu “Add Toolbox Item” to add ToolTip class to the Toolbox

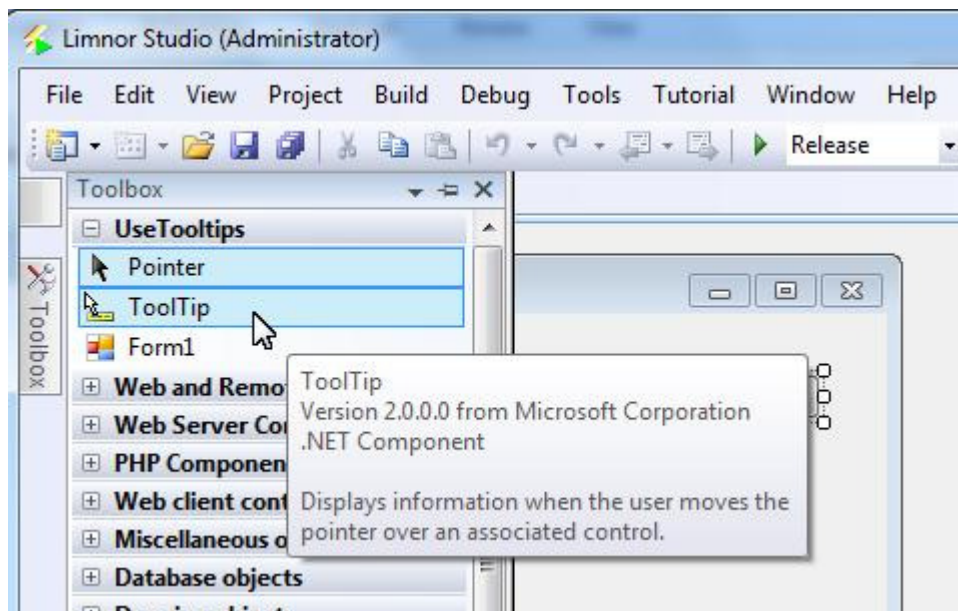

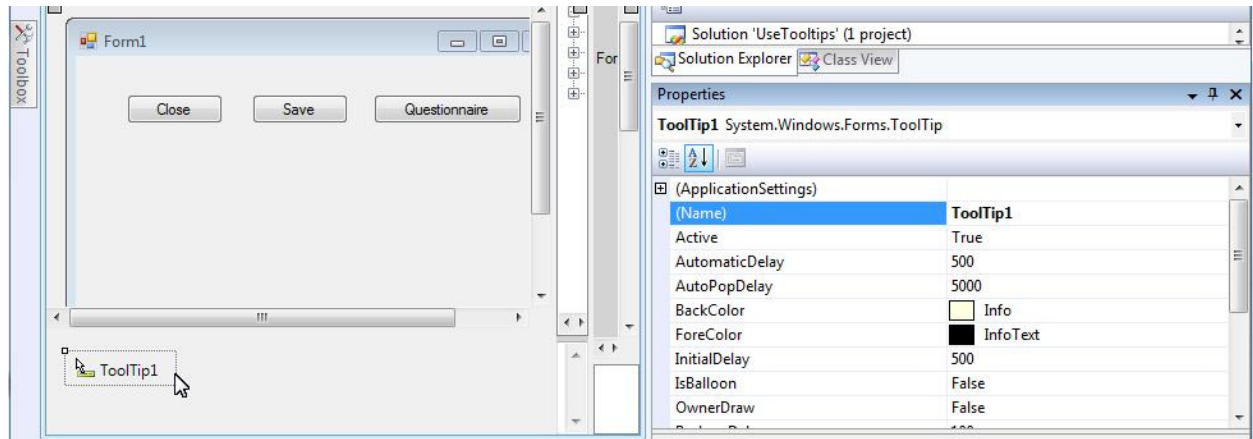

The ToolTip class appears in the Toolbox:

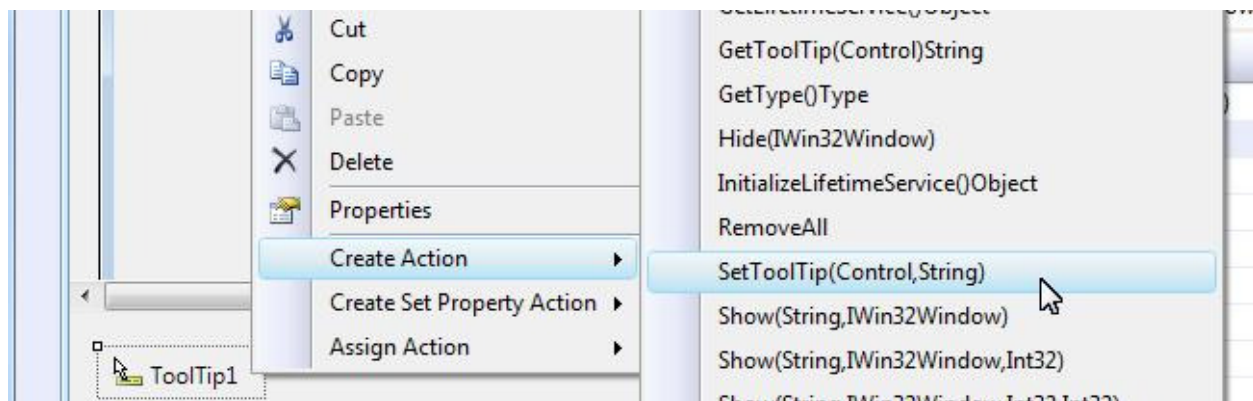

Create a Tooltips instance

Drop Tooltips to a form. We may set its properties based on our preferences:

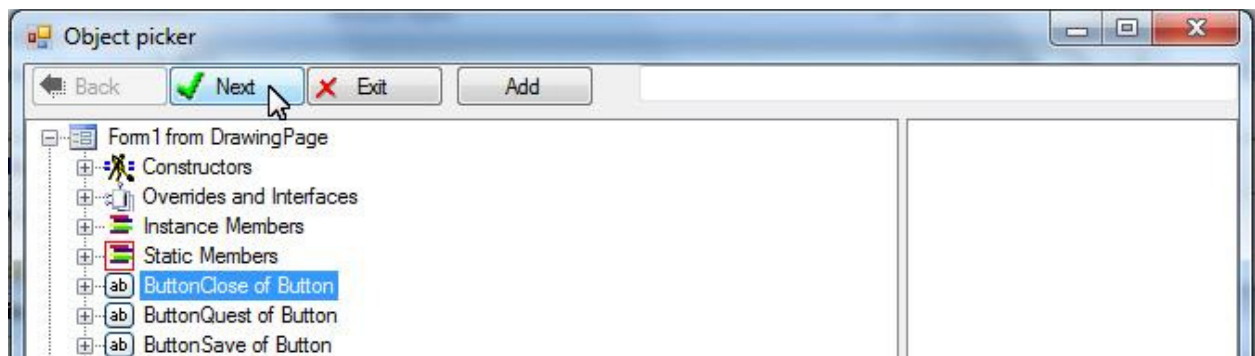

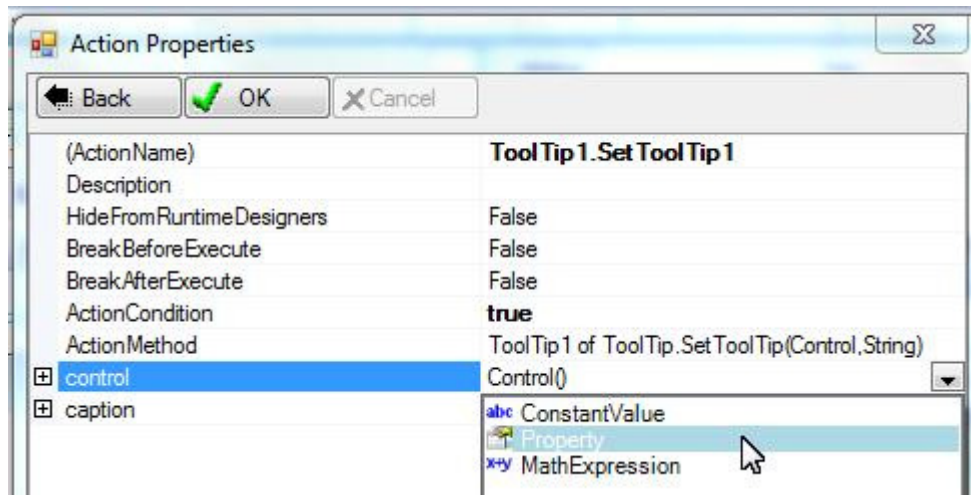

Add Tooltips contents

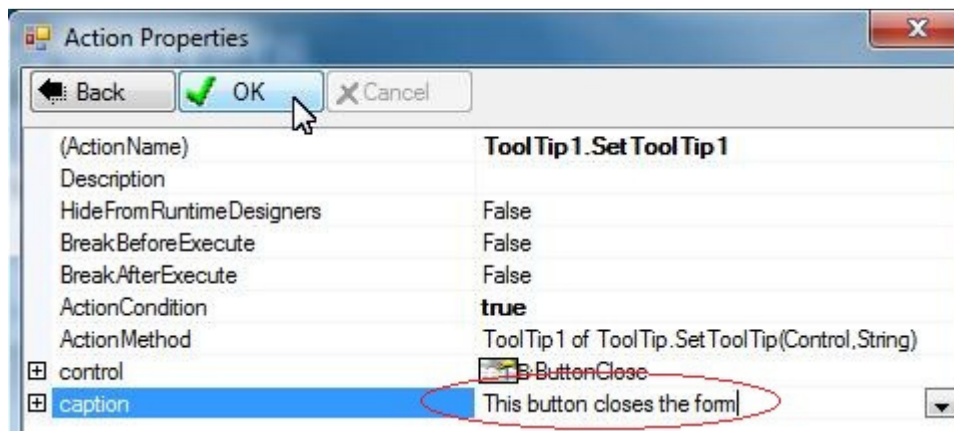

We may use a SetToolTip action to set tooltips for a control on the form.

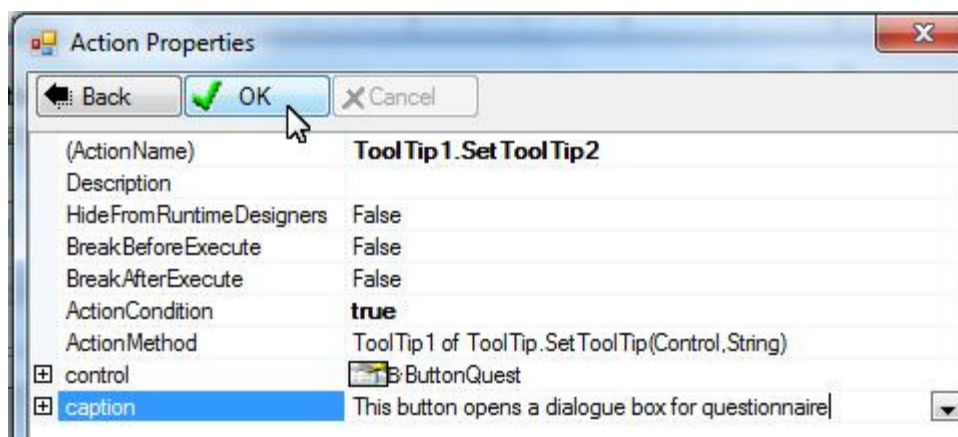

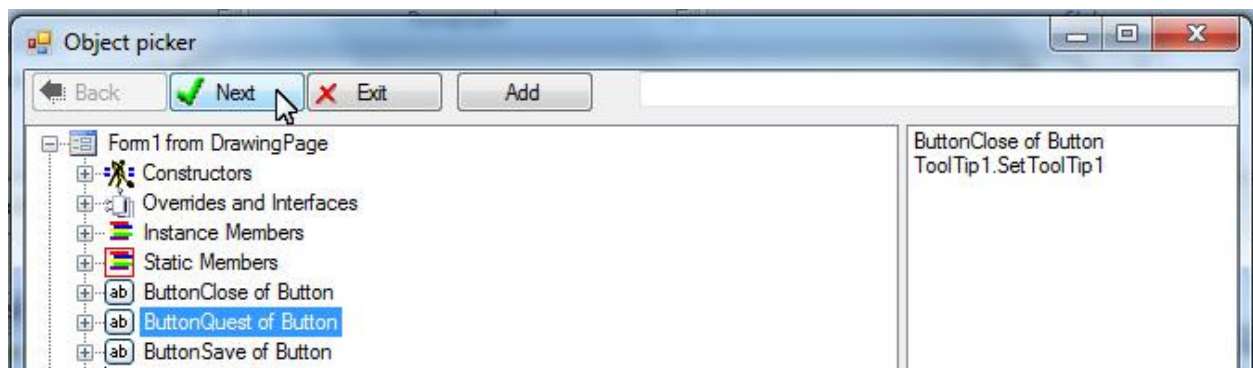

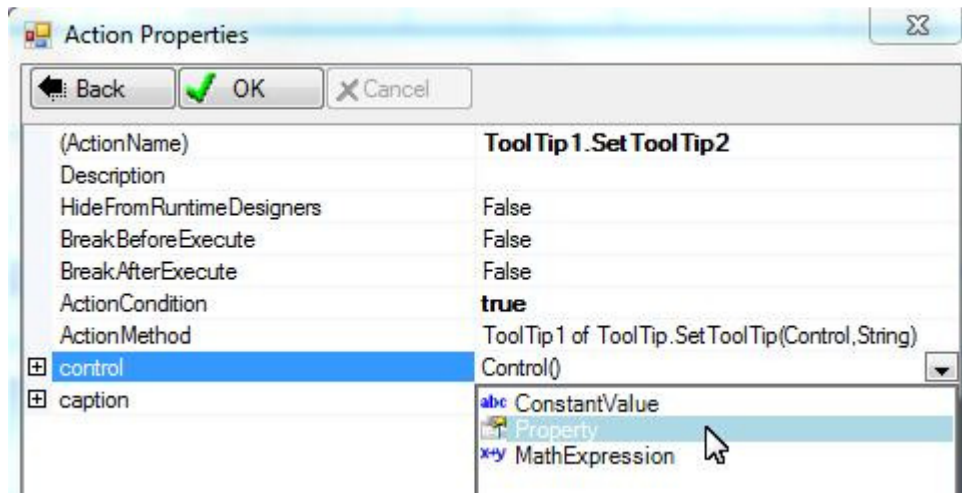

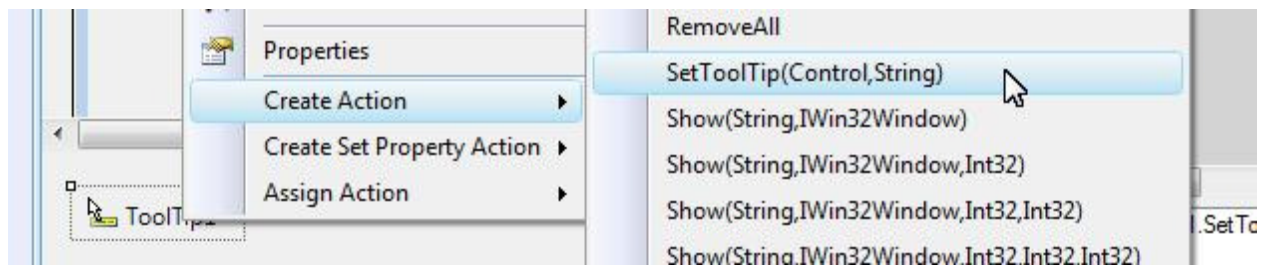

Choose "Property" to select the control for the tooltips. For example, we select the button named ButtonClose:

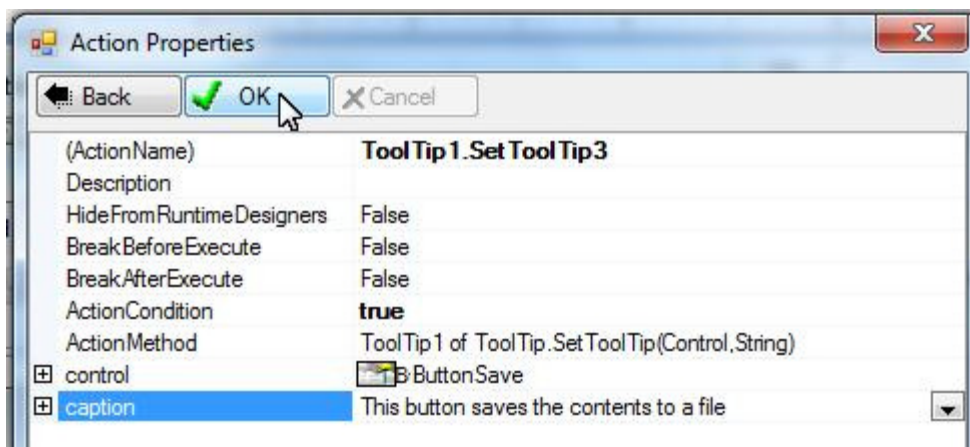

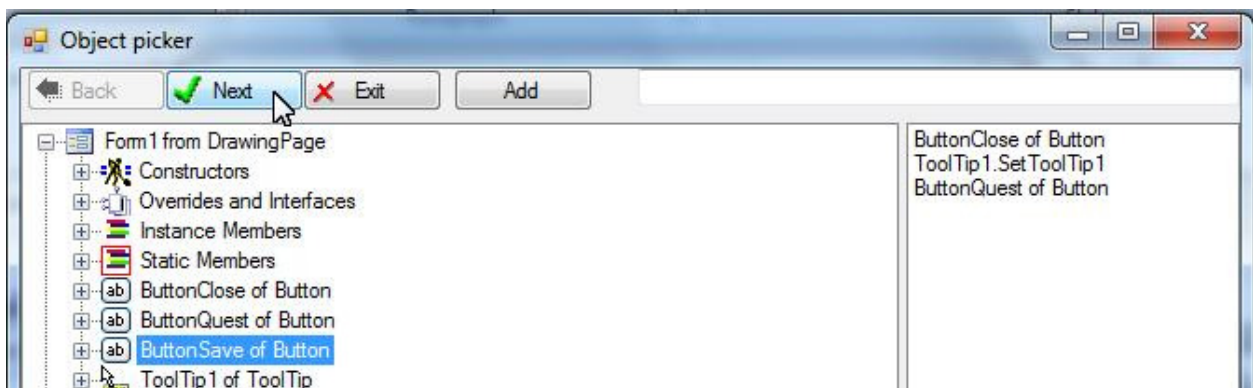

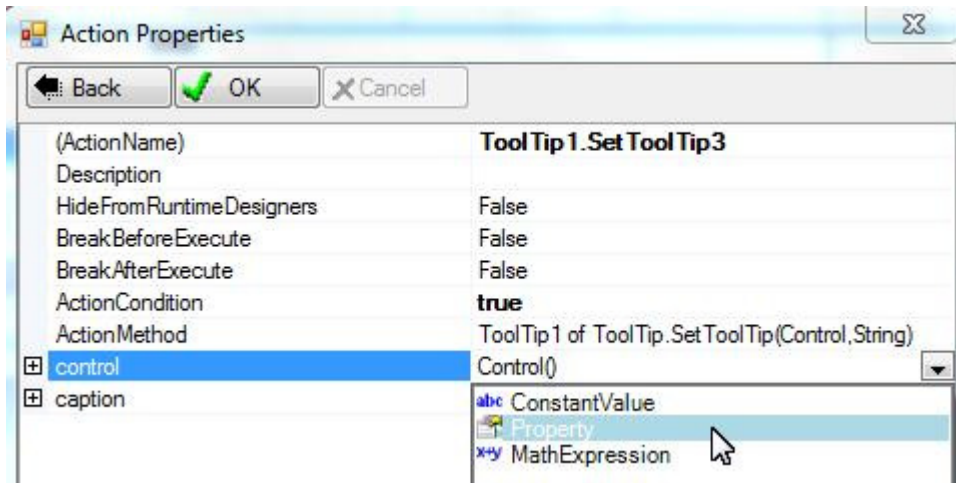

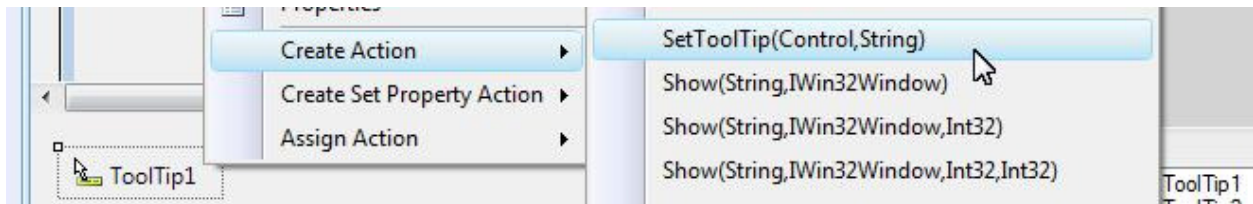

Set tooltips text to “caption”:

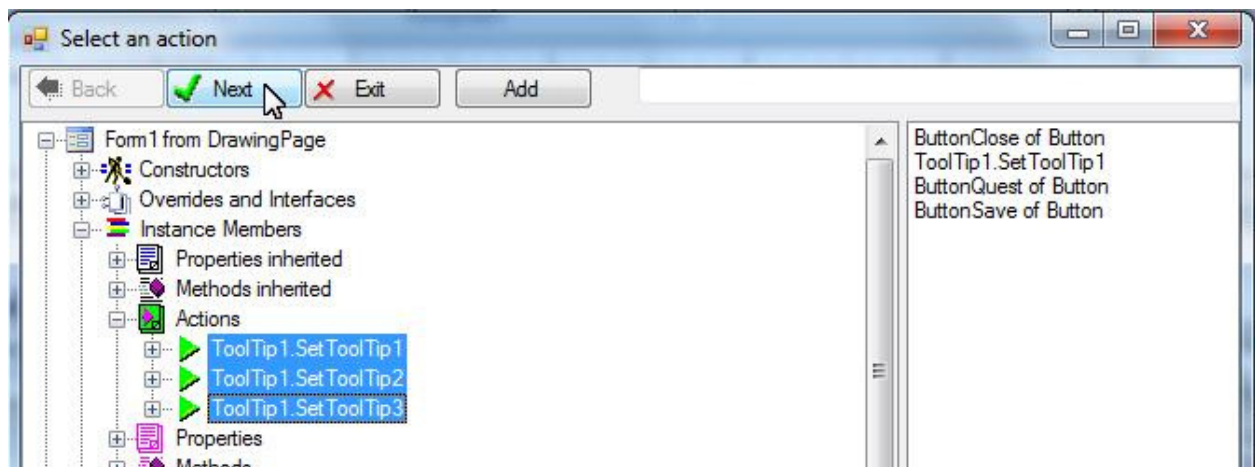

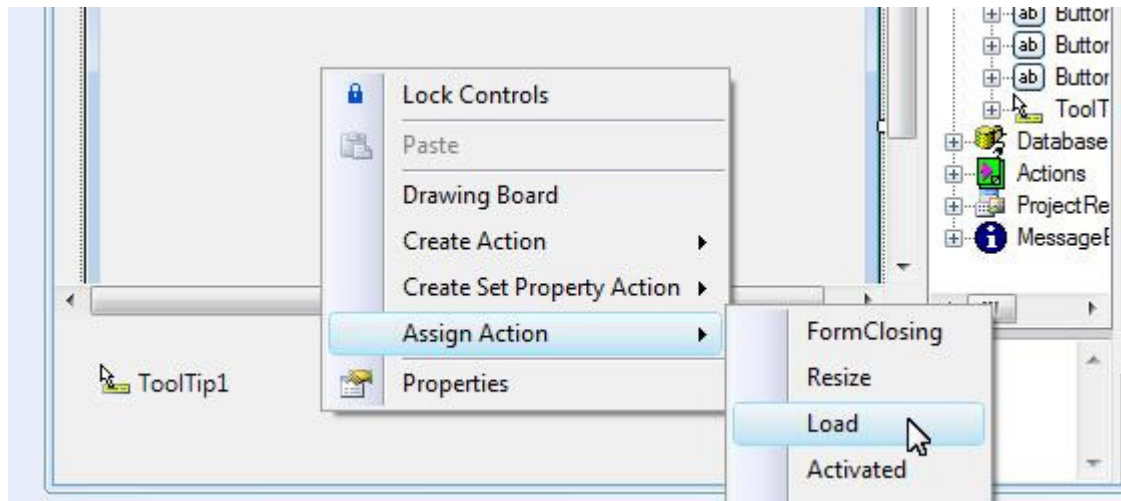

Create a SetToolTip action for every control we want to add tooltips:

Add another tooltip:

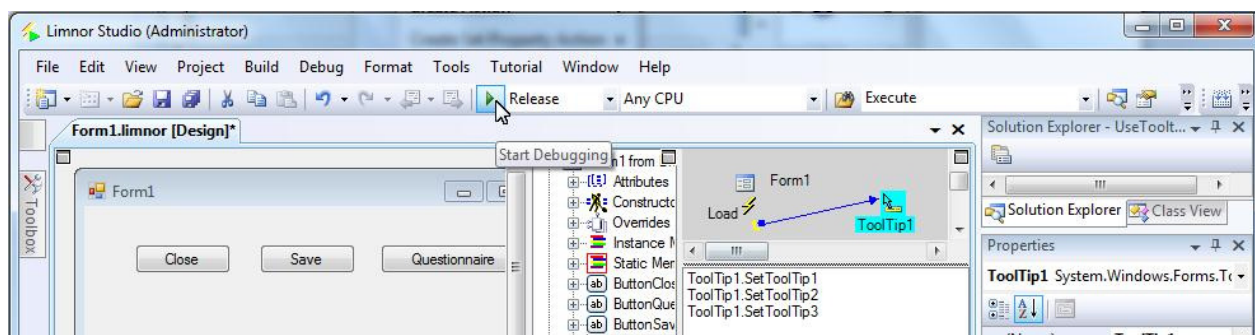

Assign the tooltips action to **Load** event of the form:

Test

We may test our programming now:

The form appears. Move mouse over a button, the tooltips for the button appears:
